INNOVATION SINCE 1877

From our home in Norway, Helly Hansen has been making professional grade gear that helps people stay and feel alive for the last 140 years.

In 1877, after many years at sea, Norwegian captain Helly Juell Hansen and his wife, Maren Margarethe, began producing oilskin jackets, trousers, sou'westers and tarpaulins, made from coarse linen soaked in linseed oil. Since then, the legacy of Helly Hansen lives on, developing and creating a long list of first-to-market innovations.

1949

HELOX - THE NEXT EVOLUTION IN WATERPROOF

Helox waterproof fabric featured a thin sheet of translucent PVC plastic that was sewn into coats to make them waterproof. It was revolutionary technology that became the must-have protection for outdoor use. With a production of 30,000 coats each month, the success was almost immediate and was used by the Norwegian delegation at the 1952 Olympic Games in Helsinki.

1961

FIBERPILE - THE TECHNICAL MIDALYER IS INVENTED

Helly Hansen partnered with Norwegian Fiber Pile Inc. and developed the original Fiberpile - the first fleece. It featured a high warmth to weight ratio and maintained its thermal qualities even when wet, making it a favorite of lumberjacks and outdoor enthusiasts. The concept lives on and the modern version of Propile is still in production today.

1970

LIFA - THE BIRTH OF TECHNICAL BASE LAYER

HH's LIFA® revolutionized the industry with the introduction of the first technical base layers. LIFA® moves moisture away from the body allowing users to stay warm and comfortable. It has been used by professionals on every ocean, many of the world's tallest peaks and was included in Outside Magazine's list of The Most Influential Gear of All Time in 2012. LIFA® remains the cornerstone of what we believe is the best technical base layer available today.

1972

Helly Hansen launches PVC foam with closed cells for use in life jackets. The foam is the preferred flotation material 30 years later.

1984

HELLY TECH® - THE WATERPROOF AND BREATHABLE SOLUTION

Helly Tech® waterproof and breathable fabric was launched in the 1980's, winning awards and setting the new standard for performance and protection. It also provided the final layer for the 1986 introduction of the Helly Hansen 3-Layer System™, an industry - first program educating people on how to dress for the outdoors. Today, Helly Tech® fabrics are engineered to deliver the specific demands of professional skiers, sailors, and at workplaces around the world.

1990

PROWOOL - THE PERFECT BLEND OF LIFA® AND MERINO

The Prowool (renamed HH LIFA® Merino) base layer for cold weather conditions was launched in the late 90's, combining LIFA® Stay Warm Technology™ with Merino wool for both moisture transport and added warmth. Designed for professionals facing the coldest conditions it quickly became the go-to piece for performance, warmth and comfort in extreme environments.

2012

H²FLOW™ - A BETTER SOLUTION FOR TEMPERATURE REGULATION

Helly Hansen introduced the new H²FLOW™ Technology in 2012 with the H²FLOW™ Jacket, which won an Award for Design Excellence from the Norwegian Design Council. The patented H²FLOW™ Jacket features an airflow venting system and a protective barrier. It allows adventurers to efficiently regulate their body temperature.

2018

LIFA® MAX - OUR WARMEST BASE LAYER IN COLD CONDITIONS

Helly Hansen introduces its warmest base layer to date by thickening the already tried and tested LIFA® fibers to produce a warmer, lightweight and flexible garment. The enhanced, unrivaled warmth and comfort is why we believe LIFA® Max is the best technical base layer available today.

2022

BRZ - CLIMATE REGULATING COMFORT

Helly Hansen Workwear launched BRZ. Designed to deliver climate regulating comfort and versatility, BRZ is a product construction bolstered by lightweight fabric and mechanical ventilation.

2023

HH CONNECT™ - ADAPTED TO WORK

HH CONNECT™ is an interchangeable pocket system that offers end users more flexibility on their product of choice. The solution allows the user to optimize their work, using different pockets for different needs.

The image features a dark, textured background, possibly a fabric or a technical material, covered in numerous small, glistening water droplets. A white rectangular box is centered in the lower half of the frame, containing the text "TECH CLINIC" in a bold, white, sans-serif font. In the upper right quadrant, there is a small, bright orange rectangular object, which appears to be a piece of tape or a marker. The overall aesthetic is technical and industrial.

TECH CLINIC

HELLY TECH®

WATERPROOF. BREATHABLE. WINDPROOF.

Helly Tech® is the waterproof and breathable outer layer between you and the elements.

Helly Tech® is constructed with Polymer Polyurethane (PU) based membranes and coating technologies. The PU membrane gives softness and stretch to the fabric, while the coating allows waterproofness and breathable qualities. Helly Tech® is made either with Hydrophilic barrier membranes or Micro-porous membranes, depending on the end-use purpose of the fabric.

The Hydrophilic barrier works on an osmotic principle, keeping salts from entering and blocking the pores. The Micro-porous PU membranes are hydrophobic- "water hating" polymers. This membrane construction is responsible for the waterproofness of Helly Tech®, making the pores up to 20.000 times smaller than water droplets, while allowing breathability since the pores are up to 700 times larger than a water vapor molecule, allowing the evaporation of sweat and heat.

HELLY TECH® PROFESSIONAL

Extremely waterproof and breathable designs and constructions. For highly aerobic, extremely wet or unusually long-lasting activities in extremely harsh conditions.

HELLY TECH® PERFORMANCE

Highly waterproof and extra breathable sport specific designs and constructions. For a wide range of high performance outdoor activities during highly challenging, changing and unpredictable weather conditions.

HELLY TECH® PROTECTION

Fully waterproof, windproof and breathable fabrics and constructions. For all situations and weather conditions where protection from the elements is needed.

LAB TESTS

WATER COLUMN, ISO 811 AND JIS LIS L 1092-B1

Gives the value pressure mm of water held back by fabric. 10.000mm is the same pressure you would experience diving to 10m or equal to the pressure from a fire hose.

BREATHABILITY, JIS L 1099-1985-B1

Gives the value of g/m²/24h - the amount of water molecules that can pass through 1 square meter of fabric within 24 hours. 15.000 grams breathability equals that a jacket is able to pass 30 lites of water in 24 hours. In comparison, our human body perspires 1 liter per 24 hours.

WATER REPELLENCE, ISO 4920: 1981 AND AATCC 35-2006

Spray test: testing of the durable water repellence before and after washing, by drizzling the fabric and measure how many drops that bounce up and if any attaches or wets out the fabric surface.

H²FLOW™

WARMER. COOLER. DRIER.

Helly Hansen jackets with the H²Flow™ technology cools you down 20% faster than competitor jackets without the technology, measured on the same weight and insulation.

H²Flow™ allows you to control your body's temperature. The technology optimizes insulation, using air pockets or holes that store warmth from the body and, at the same time, allows you to control heat and airflow through ventilation zippers, enabling the cold air to enter and the warm air to exit.

Negative or positive air space is created by adding or subtracting fabric on the inside of the garment to allow this extra air space to be filled with air heated up by the body. In both cases, the purpose is to create pockets of air in strategic areas of the body, trapped in these channels or spaces. The air contained in these pockets heats up from the body heat of the wearer, and keeps you warm.

HOW H²FLOW™ WORKS

Ventilation zippers let cold air in if you get too warm. Air pockets or holes store warmth from your body, so all H²Flow™ jackets have a high warmth to weight ratio.

WARM. DRY. COMFORTABLE.

LIFA® is a hydrophobic fiber that prohibits the absorption of liquid. The LIFA® fibers are used on the first membrane layer of base layer garments, the layer nearest to the skin. When the first yarn layer is combined with an additional layer with hydrophilic (moisture absorbing) properties, the sweat from the body is moved away from the skin and transported to the second layer, where it is absorbed. This enables the user to stay warm, dry and comfortable.

HOW LIFA® WORKS

LIFA® stay warm technology moves sweat away from your skin, keeping you warmer for longer.

LIFA® is an ultra-light weight base layer fabric that works perfectly in the autumn and winter. HH LIFA® delivers light insulation and moisture management through its 100% single layer LIFA® fibers. The LIFA® technology works best when layered under another garment, as the more garments you wear, the further the sweat and moisture will be transported out of the fabric and away from your skin.

HIGH ACTIVITY	 LIFA® MERINO WARMTH LEVEL [Progress bar: 100% filled] Professional level warmth and moisture management.	 LIFA® ACTIVE HI VIS WARMTH LEVEL [Progress bar: 50% filled] Versatile, all season comfort featuring supercharged drying next to skin.	
	LOW ACTIVITY	 LIFA® WARMTH LEVEL [Progress bar: 50% filled] Professional level performance and moisture management.	 LIFA® WARMTH LEVEL [Progress bar: 50% filled] Professional level performance and moisture management.

HH
workwear

HELLY HANSEN
workwear

When Helly Hansen first introduced the 3-layer system in the early 1970s, it was revolutionary for the industry. For the first time, there was education around the use of base layers, midlayers and outer waterproof jackets to protect people from varying outdoor conditions.

BASELAYER

DRY.

Often referred to as second skin, Helly Hansen base layers are vital to temperature regulation and moisture management in any setting. As you work hard, our LIFA® Technology moves moisture away from the skin, leaving you dry and comfortable. Our current range of base layers are categorized by warmth level, allowing you to select the best fit for your need.

MIDLAYER

WARM.

When faced with colder conditions, Helly Hansen thermal midlayers trap warm air from your body to insulate when you need it most. As you warm up, some of our midlayers can ventilate to expel excess heat and like our base layer range, also allow moisture to pass through, keeping you dry and warm for long days on site. Midlayers should always be selected according to the conditions and activity you're faced with.

PROTECTIVE LAYER

SAFE.

The final component to the 3-layer system is an outer, protective outer layer. Using our award-winning Helly Tech® waterproof membrane, we have been able to create a wide range of durable, protective and seam sealed jackets for all-season use. It is important that the outer layer is also breathable, allowing for proper ventilation and moisture management to combat overheating. Depending on the temperature, the outer layer can protect you from wind, rain or snow, making it a vital piece to any collection.

PARTNERS

3M™

Science. Applied to Life.™

3M™ is a pioneer in developing the science behind retroreflection and has been advancing the technology in new and groundbreaking ways for over 70 years. With more than 35 different products, including many high performance options, 3M™ Scotchlite™ Reflective Material offers one of the largest and most diverse portfolios in the industry. It is a trusted name in reflective material technology.

VIZ-LITE®

VizLite DT® uses phosphorescent technology that absorbs UV light energy from natural or artificial light which is then emitted as an "afterglow" in low light or no light conditions.

YKK®

Little parts. Big difference

Little parts, Big difference. High quality zippers for all purposes. YKK® is a Japanese company founded in 1934. Today, their products are sold globally and YKK® is reputed as the industry leader for quality and innovative zippers and closures.

AMANN

Since 1854, AMANN has been one of the leading international manufacturers of high-quality sewing threads, embroidery threads and Smart Yarns.

CORDURA®

Durable. Versatile. Reliable

If It's Made With CORDURA® Fabric, It's Made To Last. CORDURA® fabrics are the perfect combination of durability, versatility and reliability. For more than 40 years, people who love the outdoors have relied on CORDURA® fabrics to be as rugged as they are.

DALETEC

Daletec is the trusted Norwegian producer of protective fabrics providing flame resistant solutions for workwear that protects against heat and flames, electric arc and other workplace hazards. Daletec fabrics are famous for their consistent high quality, comfort, extreme durability, and respected for delivering reliable production and environmentally friendly solutions.

PARTNERS

POLARTEC®

The Cornerstone of fleece insulation

We work extensively with Polartec®, a famous manufacturer of lightweight and warm fleece, which is known for performance, durability and aesthetics. Main benefits for using Polartec® are warmth without high additional weight, high breathability, packable and fast drying.

PRIMALOFT®

The world's best down alternative

PrimaLoft® is a synthetic insulation technology, offering superior thermal properties with excellent water repellency. It is made up of ultra-fine fibers that form air pockets to trap heat inside. Additional feature of the ultra-fine fiber is super softness.

COMFORTEMP®

Thermal Insulation

Comfortemp® Thermal Insulation by Freudenberg is a high-performance and sustainable alternative to down. The ultra-soft & lightweight insulation is migration resistant, fast-drying and will not clump when washed. Additionally, the durable insulation offers optimal breathability, ensuring comfortability for extended wear.

BLUESIGN®

Many certifications focus on the end-product but saying nothing about substances used in the previous stages of production. BLUESIGN® provides a holistic solution for safe and environmentally friendly textile production, working at each step of the supply chain to ensure that products meet rigorous benchmarks with focus on People, Environment and Resources.

CE MARKING

Helly Hansen Workwear's (PPE) products are manufactured and certified in accordance with the Regulation (EU) 2016/425 by using harmonised European standards and therefore are CE marked.

The importance to ensure the wellbeing and safety of workers highlights the need of suitable personal protective equipment. Regulation (EU) 2016/425 defines obligation for the employers to provide the most appropriate protection against health risks and other potential hazards for their employees. That can be defined during a strict Risk Assessment at the workplace based on the PPE Regulation guidelines.

Based of various potential dangers at work, the PPE must meet relevant safety standards. Helly Hansen workwear is intended to prevent health risks that can happen during exposure to cold, heat, fire, rain, limited visibility and similar.

Helly Hansen advises to read more on our website.

For more information related to EN ISO 20471 hi vis co-certifications, please contact your local Helly Hansen Workwear representative (pg.2).

EN ISO 20471:2013+A1:2016

HIGH VISIBILITY CLOTHING

This standard specifies requirements for protective clothing capable of signalling the user's presence visually. The standard intends to provide high visibility of the user under any light conditions by day and under illumination by vehicle headlights in the dark.

There are performance classes defined based on minimum areas of retroreflective and fluorescent materials, as well as garment design requirements. Each of these classes will provide a different level of visibility, class 3 giving the highest degree. The high visibility class can be achieved with a single garment or a garment combination (e.g., jacket + pant).

	Fluorescent material	Reflective material
Class 3	0,80 m ²	0,20 m ²
Class 2	0,50 m ²	0,13 m ²
Class 1	0,14 m ²	0,10 m ²

EN 343:2019

PROTECTIVE CLOTHING

PROTECTION AGAINST RAIN

The standard specifies requirements and test methods for the performance of materials, seams, and readymade garments for protection against rain, snowflakes, fog and ground humidity. Resistance to Water Penetration and Water Vapour Resistance is tested.

Value 1 = Resistance to Water Penetration, class 1 - 4 (class 4 is the best waterproofness).

Value 2 = Water Vapour Resistance, class 1 - 4 (class 4 is the highest permeability).

Value 3 = Rain Tower Test (optional test of readymade garment), R.

EN 342:2017

PROTECTIVE CLOTHING

PROTECTION AGAINST COLD

The standard specifies test methods and requirements in protective clothing ensembles which are intended to protect against cold (air temperature below -5 °C). The standard is taking into account not only low air temperatures but also humidity and air velocity.

Helly Hansen has tested its products according to method B, which means that the Thermal Insulation has been measured for a garment ensemble (jacket + pant or coveralls) with a base layer. The value is representing protection for a wearer performing light or moderate activity.

The protection can only be guaranteed if the complete ensemble is worn.

Value 1 = Thermal Insulation Value of the Ensemble (with underwear B), I_{cler}
 Value 2 = Air Permeability, class 1 - 3 (class 3 is the most permeable)
 Value 3 = Water Penetration (optional), WP

EN 14058:2017

PROTECTIVE CLOTHING

PROTECTION AGAINST COOL ENVIRONMENTS

This standard specifies requirements and test methods for performance of single garments for protection in cool environment (air temperature above -5 °C). The garment can provide a degree of protection for a certain length of time, depending e.g., on the personal constitution and activity, the accompanying clothing and weather.

Value 1 = Thermal Resistance, class 1 - 4 (class 4 is the warmest)

Value 2 = Air Permeability, class 1 - 3 (class 3 is the most permeable)

Value 3 = Thermal Insulation Value, I_{cler}. Mandatory for class 4. Optional for classes 1 - 3.

Value 4 = Water penetration (optional), WP

IEC 61482-2:2018

PROTECTIVE CLOTHING

PROTECTIVE CLOTHING AGAINST THE THERMAL HAZARDS OF AN ELECTRIC ARC.

This standard specifies methods to test material and garments intended for use in heat- and flame-resistant clothing for workers exposed to electric arcs. Clothing fulfilling this standard ensures that the consequences of workers after the accident, will not be aggravated by the clothing itself.

Under the standard IEC 61482-2:2018 there are two test methods:

- Open Arc Test Method: EN IEC 61482-1-1:2019, measured in cal/cm² and expressed as an arc thermal protection value (ATPV), breakopen threshold energy value (EBT) or the incident energy limit (ELIM). The higher the value, the better the protection.
- Box Test Method: EN IEC 61482-1-2:2014, measured in kA. It is expressed in either APC 1 (4 kA) or APC 2 (7 kA). APC 2 is the higher level of protection.

CE MARKING

EN ISO 11611:2015

PROTECTIVE CLOTHING

PROTECTION FOR USE IN WELDING AND ALLIED PROCESSES

This standard specifies minimum basic safety requirements and test methods for protective clothing that are designed to protect the wearers body during welding and allied processes. The standard defines design requirements that would prevent hot/molten materials or sparks getting trapped in pleats, hanging and open pockets or similar. Two-piece garment must be worn together to provide the indicated level of protection.

This type of protective clothing is intended to protect the wearer against spatter (small splashes of molten metal), short contact time with flame, radiant heat from an electric arc used for welding and allied processes.

The standard is divided into two classes:

Class 1:

Provides protection for welding techniques with light formation of spatters and drops, such as TIG or MIG (with low current), with lower levels of radiant heat. The material must withstand at least 15 drops of molten metal.

Class 2:

Provides protection for welding techniques with heavy formation of spatters and drops, such as MAG (with CO₂ or mixed gases) or MIG, with higher levels of radiant heat. The material must withstand at least 25 drops of molten metal.

EN ISO 11612:2015

PROTECTIVE CLOTHING

PROTECTION AGAINST HEAT AND FLAME

This standard specifies performance requirements for garments made from flexible materials, which are designed to protect the wearer's body. Standard is to provide minimum performance requirements for

clothing to protect against heat and flame, which could be worn for a wide range of end uses. Two-piece garment must be worn together to provide the indicated level of protection.

A = Limited flame spread, A1 or A2 (A1 – surface ignition, A2 – edge ignition)
B = Convective heat, Level B1 – B3 (B3 is the highest)
C = Radiant heat, Level C1 – C4 (C4 is the highest)
D = Molten aluminium splash, Level D1 – D3 (D3 is the highest)
E = Molten iron splash, Level E1 – E3 (E3 is the highest)
F = Contact heat, Level F1 – F3 (F3 is the highest)

Garments that are designed to protect against the risk of exposure to molten metal splash by meeting the performance requirements designated by code letters D and E, meet design requirements that would prevent hot/molten materials getting trapped in pleats, hanging and open pockets or similar.

EN ISO 14116:2015

PROTECTIVE CLOTHING

PROTECTION AGAINST HEAT AND FLAME. LIMITED FLAME SPREAD

This standard specifies the performance provide minimum performance requirements for clothing in order to reduce the possibility of the clothing and/or its materials burning when in occasional and brief contact with small flames and thereby, itself constituting a hazard.

The standard is divided into three indexes, where index 3 is the highest.

Garment approved according to index 1 should not be used next to skin and should only be used together with underwear approved according to index 2 or 3.

EN 1149-5:2018

PROTECTIVE CLOTHING

ELECTROSTATIC PROPERTIES.

The standard specifies material and design requirements for electrostatic dissipative protective clothing, used as part of a total earthed system, to avoid incendiary discharges. The requirements may not be sufficient in oxygen enriched flammable atmospheres. The material must meet the requirements set out in EN 1149-1 and/or EN 1149-3.

This European standard is not applicable for protection against high voltages.

EN 13758-2:2003+A1:2006

SOLAR UV PROTECTIVE PROPERTIES

Prolonged exposure of the skin to the sun can produce both short- and long-term skin damage. UVA and UVB radiation can be significantly reduced by proper clothing. The level of protection varies considerably and is dependent on many factors, such as fabric properties and garment design. The protection may be reduced if garment is stretched, wet or sweaty.

EN 13034:2005+A1:2009

PROTECTIVE CLOTHING

PROTECTION AGAINST LIQUID CHEMICALS

This standard the minimum requirements for limited performance chemical protective clothing. It is intended for use in cases of a potential exposure to a light spray, liquid aerosols or low pressure, accidental low volume splashes. In these cases, a complete liquid permeation barrier is not required, and wearers are able to take timely adequate action when their clothing is contaminated.

Tested chemicals:

- Sulphuric Acid 30%
- Sodium Hydroxide 10%
- o-Xylene
- 1-Butanol

Materials has been subjected to the tests below. Results of each test are specified on garment label:

- A = Fabric ability to repel the chemicals (Class 1-3, highest class 3)
- B = Chemical ability to penetrate the material (Class 1-3, highest class 3)
- C = Abrasion resistance (Level 1-6, highest level 6)
- D = Tear resistance (Level 1-6, highest level 6)
- E = Tensile strength (Level 1-6, highest level 6)
- F = Puncture resistance (Level 1-6, highest level 6)

RIS-3279-TOM

HIGH VISIBILITY CLOTHING (UNITED KINGDOM ONLY)

Railway industry

This UK Rail Industry high visibility clothing standard specifies requirements for protective clothing that must be worn by staff when on the train lineside or on or near the line. It is designed to make the railway workers easily visible to drivers of approaching trains, allowing enough time to give an early audible warning.

The RIS-3279-TOM:2019 (former GO-RT 3279) standard is based on the European standard EN ISO 20471, and the garments must at minimum meet the requirements of Class 2, based on a classification system from Class 1 to Class 3. While EN 20471 allows use of three different fluorescent background colours: yellow, orange-red and red, RIS-3279-TOM:2019 standard specifies fluorescent orange colour only. Colour requirements are more precise, in order to limit the colour variance to more luminous and more vibrant orange.

CARING FOR YOUR HELLY TECH® GARMENTS

Taking care of your Helly Tech® garments are vital to the life of the product. Washing them will remove contaminating substances such as oils, dirt and salt from the surface and restore the surface tension of the fabric, allowing the membrane to perform at its best for years to come.

Unsure of when it's time to wash your garment, here are a few signs to look for:

- If the water and/or rain droplets no longer bead off the surface of the jacket and start leaving a wet mark, the durable water repellency (DWR) treatment may be worn off or de-activated.
- If the breathability does not seem to be on the same level as when you first purchased your Helly Tech® garment, the membrane could be contaminated.
- If you need to re-apply a DWR, we recommend doing so after washing and before tumble drying.

HOW TO WASH YOUR HELLY TECH® GARMENT:

1. Make sure you zip up all zippers to avoid any surface damage.
2. Wash your product with warm water as instructed on the care label located on the inside of your garment on the left-hand side in a commercial washing machine.
3. Do not use fabric softener or other detergents that have softening agents, as it will reduce the fabric surface tension and will have a negative effect on the fabric performance.
4. Helly Hansen advises to use a technical washing product and to follow the instructions given by that product. In cases where no technical washing products exist, and you only have the option of normal washing products, Helly Hansen advises to use a liquid washing product with no additives (without perfume, foam or softener).
5. A second rinse cycle with water is preferred to remove any detergents that might be left behind on the surface. It is important to remove excess detergent, as it might affect the performance of the fabric.
6. After washing, you can safely tumble dry your Helly Tech® garment in order to re-activate the DWR treatment. Please always follow the garment care label for drying instructions.

HOW TO RE-APPLY YOUR DWR:

1. Take your garment out of the washing machine and hang it, to allow all excess water to drip off.
2. Make sure all pockets and zippers are closed
3. Read the DWR label from the manufacturer's instructions and spray the DWR across the front and back of the garment, making sure to cover areas of high wear.

LIFE POCKET™

A pocket engineered to preserve your personal electronics' battery life span. Scientifically tested and proven by engineers to extend the battery life of your mobile phone or action camera in cold environments. Through thermal resistant materials and an innovative construction, the Life Pocket™ stays 2 times warmer than a regular pocket.

HH CONNECT™

HH CONNECT™ is an interchangeable pocket system that offers end users more flexibility on their product of choice. The solution allows the user to optimize their work, using different pockets for different needs.

HANGING TOOL POCKETS

The Helly Hansen hanging pockets allow you to carry all your necessary tools without the need for an additional toolbelt. Easily detachable or folded into the standard pants pocket when not in use, the hanging pockets provide additional space for small parts, featuring two compartments and a tool strap for added carrying capacity.

The hanging pockets are double lined and feature Cordura® reinforcements for added durability, making them perfect for even the toughest jobs.

EXTENDABLE LEGS

Ensuring a perfect fit for the Helly Hansen Workwear pants is more than just for comfort, it's for safety. If pants are fitted correctly, you minimize the risk of getting caught on something while on site and maximize the life of the products with strategically placed reinforcement fabrics. Additionally, the product will feel more comfortable, as it will enable optimal movement.

Most of Helly Hansen Workwear C-sized and D-sized pants can be extended by unpicking a seam at bottom hem.

How to extend the bottom hem of your HH Workwear pants:

1
If your product has the extendable leg feature, you will find 3 threads on the bottom hem, 2 close together at the nearest bottom, 1 thread above the 2 that holds the additional material. These can either be in a contrast color or in a tonal color.

2
From the inside of the pant, rip the top thread carefully, as to not tear the garment

3
Remove the thread completely and pull the hem to reveal the additional material

2-WAY STRETCH VS 4-WAY STRETCH

Stretch can be defined by the possible direction of movement, such as 2-way or 4-way stretch. In a 2-way stretch, the fabric will only move in one direction, crosswise or lengthwise. A 4-way stretch fabric means it can move in both of these directions, allowing for unrestricted movement.

2-WAY MECHANICAL STRETCH

Similarly, stretch can be defined by how the fabric is created. Elastane stretch refers to fabrics where elastane thread is part of the structure and the amount of stretch depends on the percentage of elastin within the fabric. Alternatively, when yarn texture is combined in knitting techniques to create a small amount of stretch in an overall fabric, we refer to this as a mechanical stretch.

ADAPTED TO WORK

HH CONNECT™ is an interchangeable pocket system that offers end users more flexibility on their product of choice. The solution allows the user to optimize their work, using different pockets for different needs.

A man with a beard is shown in a workshop setting, looking down. He is wearing a blue long-sleeved base layer under a dark blue zip-up jacket. He is holding a large bundle of blue and grey cables in his right hand. The background shows a wooden frame and a window. A white box with the text 'BASE LAYER' is overlaid on the image. The man's pants have a logo on the pocket that reads 'HH workWear'.

CONSISTENT COMFORT

BOA®

Dial in to fast, effortless, precision fit.

AGILITY AND SPEED

The BOA® Fit System enables faster, more powerful directional changes through a seamless connection between equipment and body.

POWER AND PRECISION

Power without compromising precision, the BOA® Fit System delivers more explosive action and unparalleled accuracy.

ENDURANCE AND HEALTH

Go further, faster and stronger. The BOA® Fit System saves energy by improving circulation and efficiency.

DURABILITY AND QUALITY

Engineered with high quality, durable materials, and rigorously field tested, the BOA® Fit System is guaranteed to perform in any environment.

CORDURA®

Durable. Versatile. Reliable

If It's Made With CORDURA® Fabric, It's Made To Last. CORDURA® fabrics are the perfect combination of durability, versatility and reliability. For more than 40 years, people who love the outdoors have relied on CORDURA® fabrics to be as rugged as they are.

SOLARCORE®

Solarcore® is a materials technology company dedicated to developing the most advanced thermal solutions for consumer, commercial and government industries.

We took NASA's well known Aerogel technology and patented ways to infuse it into form factors that deliver best-in-class thermal efficiency, while also being easy to use and incorporate into preexisting product manufacturing.

DRI-BLAZE

DRI-BLAZE

Performance Fabrics with Natural Warmth
Insulation Yarns

- Unique Nylon yarns infused with coffee carbon that naturally captures body heat for greater warming results
- The carbon coffee in the fibers provide a natural antimicrobial property
- Provides maximum moisture management
- Coffee charcoal is eco-friendly and created by usage from waste of coffee bean shell residue*

YKK®

Little parts. Big difference

High quality zippers for all purposes. YKK® is a Japanese company founded in 1934. Today, their products are sold globally and YKK® is reputed as the industry leader for quality and innovative zippers and closures.

YKK®

OrthoLite® is the leading manufacturer and supplier of OEM and open-cell foam insole technologies for the world's leading footwear brands.

Ortholite®
comfort foam insoles

CE MARKING

The main factor that distinguishes safety footwear and occupational footwear is whether or not the product is equipped with a toe cap. Safety footwear (with a toe cap) are tested and certified in accordance to EN ISO 20345 for areas of work that have a risk of injury caused by impact, compression or sharp objects. Occupational shoes (without a toe cap) are tested and certified in accordance to EN ISO 20347 and are intended for workplaces where there are no mechanical risks. Be sure to select the best footwear for your intended work area and follow all local requirements and guidelines.

EN 20345:2011 and EN 20347:2012 were superseded by EN 20345:2022 and 20347:2022 respectively. All safety footwear being certified by Helly Hansen Workwear will begin to use the new standards for FW23. It is important to note that all existing certificates for EN 20345:2011 and 20347:2012 will remain valid until their expiration.

Safety and Occupational footwear are divided into two classes : I and II. Class I indicates that the footwear is made of leather, textile or microfiber and Class II indicates that the footwear is made of rubber or Polymer. There are various protective categories within each class. Table 1.0 shows which protective properties are present in each category. Additional protective properties may be claimed in conjunction with the categories. These can be found in table 1.1.

CERTIFICATIONS

BS EN IEC 61340-4-3:2018 - ESD

FEATURES / BENEFITS

- Dynamic Arch supports the arch of the foot with just the right amount of flex to adapt to the foot while at rest and during activity
- Gel Pod absorbs shock and provides cushioning on heel strike
- PU provides additional cushioning throughout the footbed
- Open Cell PU layer aids in breathability and moisture management
- All materials are conductive to provide consistent ESD and Antistatic performance
- Meets all requirements of EN 20345 and EN 20347 when used in conjunction with Helly Hansen Workwear footwear and complies with ESD standards. The use of antistatic insoles in non-antistatic footwear does not make the footwear anti-static

Dynamic Arch – Supports the arch of the foot with just the right amount of flex to adapt to the foot while at rest and during activity

Gel Pod – Absorbs shock and provides cushioning on heel strike

PU – Provides additional cushioning

Open Cell PU – Aids in breathability and moisture management
